1 Which of these animals use echolocation? Dolphin Otter Seal Walrus Dolphin 2 Which of these is a mouth breeder? Guppy Tilapia Angel fish Mackerel Tilapia 3 I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true 4 I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before migration levels of sub-cutaneous fat increases in birds.
Otter Seal Walrus Dolphin Which of these is a mouth breeder? Guppy Tilapia Angel fish Mackerel Tilapia I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement II is true Both statements are True Both statements are True Both statements are True Both statements are False Statement II is true I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Seal Walrus Dolphin Which of these is a mouth breeder? Guppy Tilapia Angel fish Mackerel Tilapia I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement II is true Statement II is true Finally and the series of sub-cutaneous fat decreases in birds, II- Before
Walrus Dolphin Which of these is a mouth breeder? Guppy Tilapia Angel fish Mackerel Tilapia I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement II is true Statement II is true Both statements are True Both statements are True Both statements are False Statement II is true The Both statements are True Both statements are False Statement I is true The Both statements are False Statement I is true The Both statements are False Statement I is true The Both statements are False Statement I is true
Dolphin Which of these is a mouth breeder? Guppy Tilapia Angel fish Mackerel Tilapia I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement II is true Statement II is true Both statements are False Statement I is true The Both statements are True Both statements are False Statement I is true The Both statements are False Statement I is true
Which of these is a mouth breeder? Guppy Tilapia Angel fish Mackerel Tilapia 3 I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true 4 I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are True Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Guppy Tilapia Angel fish Mackerel Tilapia 3 I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true 4 I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement II is true Statement II is true Both statements are True Both statements are True Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Tilapia Angel fish Mackerel Tilapia I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement II is true Statement II is true Both statements are True Both statements are False Statement I is true The Both statements are False Statement I is true The Both statements are False Statement I is true The Both statements are False Statement I is true The Both statements are False Statement I is true
Angel fish Mackerel Tilapia I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are True Both statements are False Statement I is true T- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Angel fish Mackerel Tilapia I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are True Both statements are False Statement I is true T- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Mackerel Tilapia I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are False Statement I is true I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are True Both statements are False Statement I is true I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
I- Megachiropteran bats use echolocation to detect prey; II- Microchiropteran bats use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are True Both statements are False Statement I is true I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
use echolocation to detect prey Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true 4 I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Statement I is true Statement II is true Both statements are True Both statements are False Statement II is true 4 I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Statement II is true Both statements are True Both statements are False Statement II is true 4 I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Both statements are True Both statements are False Statement II is true 4 I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Both statements are False Statement II is true I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Statement II is true I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are False Statement I is true I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
I- Many desert animals are crepuscular; II- Many desert animals are nocturnal Statement I is true Statement II is true Both statements are True Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Statement I is true Statement II is true Both statements are True Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Statement II is true Both statements are True Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Both statements are True Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Both statements are False Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
Statement I is true 5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
5 I- Before migration levels of sub-cutaneous fat decreases in birds, II- Before
migration levels of sub-cutaneous fat increases in birds.
Statement I is true
Statement II is true
Both statements are True
Both statements are False
Statement II is true
6 A plant is processed to yield a drug, by this we are referring to which value of
biodiversity?
Consumptive use value
Productive use value
Aesthetic value
Ethical value
Productive use value
Which of these biosphere reserves is found in Madhya Pradesh?
Nandadevi
Pachmarhi
Sunderbans
Rann of Kutch
Pachmarhi
8 Which of these countries is part of Indo-Burma hot spot?
Malaysia
Singapore
Indonesia

	Thailand
	Thailand
9	Surimi is made by grinding meat of
	Tuna
	Chicken
	Pomphret
	Sardine
	Sardine
10	Which project of Baba Amte has an 'animal ark'?
	Lok Biradari
	Anand van
	Ashok van
	Somnath
	Lok Biradari
11	Anna Hazare worked in which village?
	Ralegaon Siddhi
	Hemalkasa
	Hinganghat
	Sangameshwar
	Ralegaon Siddhi
12	Who wrote "Fall of a Sparrow"?
	Dr Varghese Kurian
	Dr Salim Ali
	Dr Zafar Futehally
	Dr Abdulali
	Dr Salim Ali
13	Who wrote 'The Man with the Billion Litre Idea'?
	Dr Varghese Kurian
	Dr Salim Ali
	Tribhuvandas Patel
	Kiran Mazumdar Shaw
	Dr Varghese Kurian
14	UN conference on Environment and Development was held in 1992 at Rio de
	Janerio, Brazil and was called?
	CBD
	Earth Summit
	UN Summit on Environment
	IUCN
	Earth summit
